

Abyss L800 Underwater LED Marine Light

LIGHT COLOR: WHITE

List Price: \$380

Buy Online! www.AbyssLite.com

The Abyss L800 is our solution for boaters seeking ultra-wide angle light distribution from a small package. This underwater marine LED light is compact, flush-mounted, and waterproof and is well suited for difficult or small installations, such as trim tabs and rudders. The L800 is available in two LED colors: [Brilliant White \(model L800\)](#) and [Deep Blue \(model L800 B\)](#).

State-of-the-Art LED Technology

All of our lighting products feature state-of-the-art light emitting diode (LED) technology, ensuring longevity (over 35,000 hours of operation), reliability, and efficiency.

The exceptionally low electrical power requirement of our LED technology reduces battery drainage, allowing the light to remain on for a longer period of time, even with the boat's engines off.

The L800 produces a large light output despite its low profile, measuring only 5/8" deep. To aid in its cooling while lit, we've designed it with a pass-through cooling system that allows water to surround it on 360 degrees, keeping the light cool and efficient.

About Abyss Technology

We are an original equipment supplier to several major brand name boat builders and have built a reputation for quality, reliability, value, and excellent service.

We've been designing, assembling, distributing, and servicing our popular line of marine lighting in the United States for over five years and have earned industry recognition for our outstanding quality and customer service. Whether you're looking to attract fish or improve nighttime ambiance, our underwater lights offer the best value in the industry.

Construction and Installation

The L800 is constructed from marine grade bronze with an impact resistant tempered glass lens. Carefully assembled and permanently sealed, our underwater lights are totally waterproof and fully submersible, suitable for both salt water and fresh water usage.

Because of its flush-mounted design, installation only requires a tiny 3/16" hole in your transom. Many competing lights require a large (several inch diameter) hole for mounting, creating potential structural strength, leakage, and other concerns.

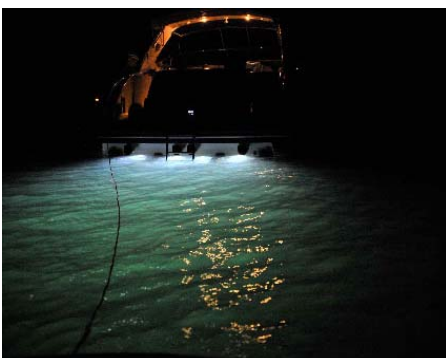

Installation of the L800 is easy; simply pass the supply wire through a tiny 3/16" hole in the transom and route it to a power source. Apply marine grade sealant to the hole (as well as the mounting holes) and fasten the light to your boat using the included stainless steel screws. The L800 is equipped with five feet of electrical wire and comes with a voltage regulator to protect it from onboard voltage variations.

Non-Marine Applications

Fully submersible, underwater boat lights have been popular with boaters for many years as a way to illuminate the water around their watercraft. Our LED lights are also an excellent choice for docks, ponds, fountains, or any other underwater lighting purpose.

Warranty

All Abyss Technology lights are covered by a manufacturer's warranty covering defects in materials and workmanship for two years from the date of purchase.

Electrical Specifications		Light Output		Measurements/Construction	
Input voltage:	12-30 volts DC	Type:	Super wide angle (120° beam)	Housing:	Marine-grade stainless steel
Power regulator:	Not required	Source:	15 LED's	Lens:	Impact-resistant tempered glass
Operating voltage:	12.5 volts DC	Output:	610 lumens	Length:	9 1/4" (235 mm)
Current draw:	1.7 amps	Colors available:	Brilliant White: L800 Deep Blue: L800 B	Width:	1 1/4" (32 mm)
Power consumption:	20 watts	Illumination:	Up to 50 ft. in clear water	Depth:	5/8" (16 mm)
